## Digital Logic Design

Errata

- Page 6: Table 1-1. The symbol for milli- should be $m$ instead of $M$.
- Page 40: Hamming Distance, last line in second paragraph:
"... of a code by $k / p$ " should be "... of a code by $k / n$ ".
- Page 43: 2-19. "Which of ... in Figure 2.4?"

The correct figure should be "Figure 2.2".

- Page 76: Figure 4-29.

The signal for $B$ in the figure on the right is incorrect. The correct diagram is shown below:

Figure 4-29 Propagation delay in a circuit.

- Page 185: Figure 8.23. Missing label " $0 / 0$ " from state 0 to state 1.
- Page 240: Answer for 2-29. Smallest negative value should be -31.75.
- Page 242: Answer for 6-6. The truth table, expressions and circuit for $W$ are wrong. Please see page 2 for correct answers.
- Page 246: Answer for 8-11. The next states for the unused states, and the state diagram are wrong. Please see page 3 for correct answers.

## Chapter 8

8-11. $\quad T A=A \cdot B+B \cdot C$ or $A \cdot B+A^{\prime} \cdot C$
$T B=C$
$T C=A^{\prime}+B^{\prime}$
The following are the next states for the unused states:
$000 \rightarrow 001$
$001 \rightarrow 010$ or 110
$111 \rightarrow 001$
