### **Beyond Traditional Logic**

### Not just sets

How to express this using traditional logic?

- "1 + 1 = 3"
- "The sun is shining today."
- "Earth has more mass than Mars."

Motivation Propositional Atoms Constructing Propositions Syntax of Propositional Logic

・ロト ・雪 ・ ・ ヨ ・

### **Beyond Traditional Logic**

### Not just sets

How to express this using traditional logic?

- "1 + 1 = 3"
- "The sun is shining today."
- "Earth has more mass than Mars."

#### Arguments as Propositions

How to formalize a proposition of the form

If  $p_1$  then  $p_2$ ?

Motivation Propositional Atoms Constructing Propositions Syntax of Propositional Logic

・ロン ・雪 > ・ 画 > ・

臣

### Atoms

### Anything goes

We allow any kind of proposition, for example "The sun is shining today".

Motivation Propositional Atoms Constructing Propositions Syntax of Propositional Logic

・ロト ・ 日 ・ ・ 回 ・ ・ 日 ・

### Atoms

### Anything goes

We allow any kind of proposition, for example "The sun is shining today".

#### Convention

We usually use p, q,  $p_1$ , etc, instead of sentences like "The sun is shining today".

Motivation Propositional Atoms Constructing Propositions Syntax of Propositional Logic

(日)

### Atoms

### Anything goes

We allow any kind of proposition, for example "The sun is shining today".

#### Convention

We usually use p, q,  $p_1$ , etc, instead of sentences like "The sun is shining today".

#### Atoms

More formally, we fix a set A of propositional atoms.

### Meaning of Atoms

Motivation **Propositional Atoms** Constructing Propositions Syntax of Propositional Logic

・ロト ・雪 ト ・ヨ ト

臣

#### Models assign truth values

A model assigns truth values (F or T) to each atom.

### Meaning of Atoms

Motivation **Propositional Atoms** Constructing Propositions Syntax of Propositional Logic

・ロ・ ・ 四・ ・ 回・ ・ 日・

#### Models assign truth values

A model assigns truth values (F or T) to each atom.

#### More formally

A model for a propositional logic for the set A of atoms is a mapping from A to  $\{T, F\}$ .

### Meaning of Atoms

Motivation **Propositional Atoms** Constructing Propositions Syntax of Propositional Logic

・ロ・ ・ 四・ ・ 回・ ・ 回・

#### Models assign truth values

A model assigns truth values (F or T) to each atom.

#### More formally

A model for a propositional logic for the set A of atoms is a mapping from A to  $\{T, F\}$ .

#### How do you call them?

Models for propositional logic are called *valuations*.

#### Motivation Propositional Atoms Constructing Propositions Syntax of Propositional Logic

크

#### Example

Some valuation Let  $A = \{p, q, r\}$ . Then a valuation  $v_1$  might assign p to T, q to F and r to T.

#### Example

Some valuation Let  $A = \{p, q, r\}$ . Then a valuation  $v_1$  might assign p to T, q to F and r to T.

#### More formally

$$p^{v_1} = T, q^{v_1} = F, r^{v_1} = T.$$

#### Example

Some valuation Let  $A = \{p, q, r\}$ . Then a valuation  $v_1$  might assign p to T, q to F and r to T.

#### More formally

$$p^{v_1} = T, q^{v_1} = F, r^{v_1} = T.$$
  
write  $v_1(p)$  instead of  $p^{v_1}$ 

Motivation Propositional Atoms Constructing Propositions Syntax of Propositional Logic

### **Building Propositions**

We would like to build larger propositions, such as arguments, out of smaller ones, such as propositional atoms. We do this using *operators* that can be applied to propositions, and yield propositions.

Motivation Propositional Atoms Constructing Propositions Syntax of Propositional Logic

臣

### **Unary Operators**

Let *p* be an atom.

#### All possibilities

The following options exist:

• 
$$p^{v} = F: (op(p))^{v} = F$$

## **Inductive Definition**

#### Definition

For a given set A of propositional atoms, the set of *well-formed* formulas in propositional logic is the least set F that fulfills the following rules:

- The constant symbols  $\perp$  and  $\top$  are in *F*.
- Every element of A is in F.
- If  $\phi$  is in *F*, then  $(\neg \phi)$  is also in *F*.
- If  $\phi$  and  $\psi$  are in *F*, then  $(\phi \land \psi)$  is also in *F*.
- If  $\phi$  and  $\psi$  are in *F*, then  $(\phi \lor \psi)$  is also in *F*.
- If  $\phi$  and  $\psi$  are in *F*, then  $(\phi \rightarrow \psi)$  is also in *F*.

Example

Motivation Propositional Atoms Constructing Propositions Syntax of Propositional Logic

臣

### $(((\neg p) \land q) \rightarrow (\top \land (q \lor (\neg r))))$

### is a well-formed formula in propositional logic.
More Compact in BNF

Motivation Propositional Atoms Constructing Propositions Syntax of Propositional Logic

臣

# $\phi ::= \boldsymbol{p} \mid \bot \mid \top \mid (\neg \phi) \mid (\phi \land \phi) \mid (\phi \lor \phi) \mid (\phi \to \phi)$

(Backus Naur Form)

Motivation Propositional Atoms Constructing Propositions Syntax of Propositional Logic

3

# Convention

The negation symbol  $\neg$  binds more tightly than  $\land$  and  $\lor$ , and  $\land$  and  $\lor$  bind more tightly than  $\rightarrow$ . Moreover,  $\rightarrow$  is *right-associative*: The formula  $p \rightarrow q \rightarrow r$  is read as  $p \rightarrow (q \rightarrow r)$ .

Motivation Propositional Atoms Constructing Propositions Syntax of Propositional Logic

・ロ・ ・ 四・ ・ 回・ ・ 回・

# Convention

The negation symbol  $\neg$  binds more tightly than  $\land$  and  $\lor$ , and  $\land$  and  $\lor$  bind more tightly than  $\rightarrow$ . Moreover,  $\rightarrow$  is *right-associative*: The formula  $p \rightarrow q \rightarrow r$  is read as  $p \rightarrow (q \rightarrow r)$ .

#### Example

$$(((\neg p) \land q) \rightarrow (p \land (q \lor (\neg r))))$$

can be written as

$$\neg p \land q \rightarrow p \land (q \lor \neg r)$$

Operations on Truth Values Evaluation of Formulas

# **Evaluation of Formulas**

#### Definition

The result of *evaluating* a well-formed propositional formula  $\phi$  with respect to a valuation v, denoted  $v(\phi)$  is defined as follows:

- If  $\phi$  is the constant  $\bot$ , then  $v(\phi) = F$ .
- If  $\phi$  is the constant  $\top$ , then  $v(\phi) = T$ .
- If  $\phi$  is an propositional atom p, then  $v(\phi) = p^{v}$ .
- If  $\phi$  has the form  $(\neg \psi)$ , then  $v(\phi) = \setminus v(\psi)$ .
- If  $\phi$  has the form  $(\psi \wedge \tau)$ , then  $v(\phi) = v(\psi) \& v(\tau)$ .
- If  $\phi$  has the form  $(\psi \lor \tau)$ , then  $v(\phi) = v(\psi) | v(\tau)$ .
- If  $\phi$  has the form  $(\psi \to \tau)$ , then  $v(\phi) = v(\psi) \Rightarrow v(\tau)$ .

Operations on Truth Values Evaluation of Formulas
