

Software Engineers at National University Health System

You will be involved in development of software and interfaces that will support data & text mining technologies, ontology development, researchers' tools desktop and the technical solution for extraction and assembly of bioinformatics data and metadata. You will also manage and support the executive dashboard and reporting system for research informatics. In this role, you will work on software projects that will support the Academic Informatics Office of National University Health System (NUHS). NUHS comprises the NUS School of Medicine, NUS Faculty of Dentistry and the National University Hospital.

Requirements

- Degree in Computer Science/Information Technology with programming experience in Java, JavaScript, ASP & Perl/Python
- Able to adapt to the medical research domain to understand and support clinical research IT in a short time
- After 3 months an assessment will be made and the potential candidate could be offered a full-time position in this role with NUHS.
