Subject: Computational and Systems Biology at MSKCC - Faculty Recruitment

Dear Colleague,

We are continuing our drive to recruit several new faculty members in computational and systems biology at Memorial Sloan-Kettering Cancer Center in New York City, joining cBio, the Computational Biology Department that currently has four research groups (Gregoire Altan-Bonnet, Christina Leslie, Chris Sander, Jose Vilar) as well as the Bioinformatics Core (Alex Lash, Nick Socci).

See the announcement at <http://cbio.mskcc.org/jobs/ads/faculty.pdf>

cBio offers unique opportunities for basic computational and systems biology research in a translational-clinical environment.

Please have a look and pass this on to interested friends and colleagues at any level of seniority. Typical applicants are computational biologists and may also have an experimental research program in systems biology.

The application timeline for faculty is October 1, 2007. In exceptional cases, we can consider applications after this date. Application instructions at <http://cbio.mskcc.org/jobs/ads/faculty-application-format.pdf>.

We are also looking for postdocs and staff members for the existing groups on an ongoing basis.

Thanks very much,

Chris Sander, Chair, cBio@MSKCC
