

Bioinformatics Specialist

You will be involved in projects using next generation sequencing, and will be required to perform computational sequence alignments and assemblies, and analysis of the data. More details regarding the projects will be disclosed during the interview.

Currently, our laboratory uses both genetic and genomic tools in our translational research projects, which involves collaborations with clinicians.

Our Organization

The National Cancer Centre Singapore is a national and regional centre for the prevention and treatment of cancer.

Requirements

MSc or PhD

Experience in Bioinformatics

Experience in Molecular Biology techniques will be an added advantage

Highly self-motivated with a strong interest in biomedical research

A team player with good inter-personal skills

We offer a pay package that includes medical benefits, performance bonus and housing allowance for non-Singaporeans.

Please send your detailed curriculum vitae stating the names and e-mail addresses of 3 professional referees by e-mail to A/Prof Ann Lee at dmslsg@nccs.com.sg
