### **Motivation**

#### Trees in computer science

Trees are ubiquitous in CS, covering operating systems, computer graphics, data bases, etc.

### **Motivation**

#### Trees in computer science

Trees are ubiquitous in CS, covering operating systems, computer graphics, data bases, etc.

#### Trees as data structures

Provide O(log N) search operations

<ロ> <同> <同> < 同> < 同> < 同> <</p>

### **Motivation**

#### Trees in computer science

Trees are ubiquitous in CS, covering operating systems, computer graphics, data bases, etc.

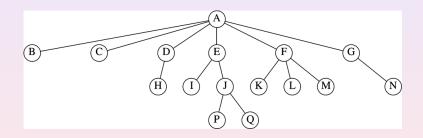

#### Trees as data structures

Provide O(log N) search operations

#### Heaps

Serve as basis for other efficient data structures, such as heaps

## Example

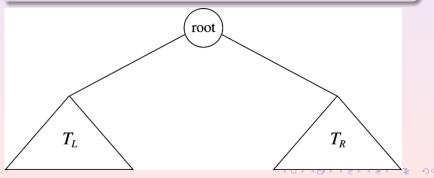

æ.

(日)

### **Binary Trees**

### Definition

A binary tree is a tree in which no node can have more than two children.

### Implementation

```
ClassBinaryNode {

// accessible by other package routines

Object element; // The data in the node

BinaryNode left; // Left child

BinaryNode right; // Right child

}
```

Ξ.

< □ > < □ > < □ > < □ > < □ >

### How About Lists, Arrays, Stacks, Queues?

#### Problem with Lists, Arrays, Stacks, Queues

With lists, arrays, stacks and queues, we can only access the collection using an index or in a LIFO/FIFO manner.

Motivation

Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

### How About Lists, Arrays, Stacks, Queues?

#### Problem with Lists, Arrays, Stacks, Queues

With lists, arrays, stacks and queues, we can only access the collection using an index or in a LIFO/FIFO manner. Therefore, search takes linear time.

Motivation

Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

### How About Lists, Arrays, Stacks, Queues?

#### Problem with Lists, Arrays, Stacks, Queues

With lists, arrays, stacks and queues, we can only access the collection using an index or in a LIFO/FIFO manner. Therefore, search takes linear time.

#### How to avoid linear access?

For efficient data structures, we often exploit properties of data items.

#### Motivation

Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

# Example

### Simple license plates

Let us say the license plate numbers are positive integers from 0 to 9999.

크

・ロト ・ 日 ・ ・ ヨ ・ ・ ヨ ・ ・

#### Motivation

Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

# Example

### Simple license plates

Let us say the license plate numbers are positive integers from 0 to 9999.

### Solution

Keep an array inCarPark of boolean values (initially all false).

(日)

#### Motivation

Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

# Example

### Simple license plates

Let us say the license plate numbers are positive integers from 0 to 9999.

### Solution

- Keep an array inCarPark of boolean values (initially all false).
- insert(i) sets inCarPark[i] to true

イロト イヨト イヨト イヨト

#### Motivation

Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

# Example

### Simple license plates

Let us say the license plate numbers are positive integers from 0 to 9999.

### Solution

- Keep an array inCarPark of boolean values (initially all false).
- insert(i) sets inCarPark[i] to true
- remove(i) sets inCarPark[i] to false

イロト イヨト イヨト イヨト

#### Motivation

Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

# Example

### Simple license plates

Let us say the license plate numbers are positive integers from 0 to 9999.

### Solution

- Keep an array inCarPark of boolean values (initially all false).
- insert(i) sets inCarPark[i] to true
- remove(i) sets inCarPark[i] to false
- contains(i) returns inCarPark[i].

< ロ > < 団 > < 豆 > < 豆 >

#### Motivation

Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

### The Sad Truth

Not all data items are small integers!

In Singapore, license plate numbers start with 2–3 letters, followed by a number, followed by another letter.

크

・ロト ・四ト ・ヨト ・ヨト

#### Motivation

Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

# The Sad Truth

### Not all data items are small integers!

In Singapore, license plate numbers start with 2–3 letters, followed by a number, followed by another letter.

#### But: one property remains

We can *compare* two license plate numbers, for example lexicographically.

<ロ> <同> <同> < 同> < 同> < 同> <</p>

Motivation

Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

### Lexicographic Ordering on License Plate Numbers

 First compare the first letters as in a dictionary e.g. "SBX..." < "SCY...", "SA..." < "SAB..."</li>

・ロト ・ 日 ・ ・ ヨ ・ ・ ヨ ・ ・

Motivation Excursion: Bounded Types Binary Search Trees Binsertion and Deletion Analysis

### Lexicographic Ordering on License Plate Numbers

- First compare the first letters as in a dictionary e.g. "SBX..." < "SCY...", "SA..." < "SAB..."</li>
- If the letters are the same, use the following number e.g. "SBX 100" < "SBX 101"</li>

Motivation Excursion: Bounded Types Binary Search Trees Binsertion and Deletion Analysis

### Lexicographic Ordering on License Plate Numbers

- First compare the first letters as in a dictionary e.g. "SBX..." < "SCY...", "SA..." < "SAB..."</li>
- If the letters are the same, use the following number e.g. "SBX 100" < "SBX 101"</li>
- If the letters and numbers are the same, use the final letter e.g. "SBX 101 P" < "SBX 101 Q"</li>

<ロ> <同> <同> < 同> < 同> < 同> <</p>

Motivation

Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

### The Comparable Interface

#### **API Interface Comparable**

```
interface Comparable<T> {
    public int compareTo(T o);
}
```

Ξ.

・ロン ・四 ・ ・ ヨン ・ ヨン

Motivation

Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

### Mathematics of Comparable

### Ordering

Instances of the Comparable interface are subject to a *total* ordering. For any two elements x and y, we know whether:

- x smaller then y: x.compareTo(y) returns negative int
- x smaller then y: x.compareTo(y) returns positive int
- x equals y: x.compareTo(y) returns 0

Motivation Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

### **Excursion:** Bounded Types

Type variables

allow the programmer to refer to a type at multiple places.

#### Example

. .

# public static <Any> SchemeList<Any> concatAll(SchemeList<SchemeList<Any>> aListList )

{

・ロト ・ 日 ・ ・ ヨ ・ ・ ヨ ・ ・

Motivation Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

# **Excursion:** Bounded Types

#### Wildcard Types

Sometimes, a generic type is completely unrestricted. We use ? without having to declare it.

#### Example

```
public static int
iterativeLength(SchemeList<?> aList) {
    int acc = 0;
    while (! aList.isNil()) {
        aList = aList.cdr();
        acc++; }
    return acc; }
```

Motivation Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

### **Excursion:** Bounded Types

#### Upper bounds for types

Sometimes, a type variable must be *bounded* to restrict the types that it stands for to a class and all its sub-classes.

### Example

. . .

interface Collection <E> { ... boolean add(E e); boolean addAll(Collection <? extends E> c);

ヘロン 人間 とくほ とくほう

Motivation Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

### **Excursion:** Bounded Types

#### interface Comparable

```
interface Comparable<T> {
    public int compareTo(T o);
}
```

#### Invariance of generic types

If Lion is a subtype of Animal, then Cage<Lion> is *not* a subtype of Cage<Animal>.

크

・ロン ・回 と ・ ヨ と

Motivation Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

### **Excursion:** Bounded Types

### Invariance of generic types

If Lion is a subtype of Animal, then Cage<Lion> is *not* a subtype of Cage<Animal>.

크

・ロト ・四ト ・ヨト ・ヨト

Motivation Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

### **Excursion:** Bounded Types

#### Invariance of generic types

If Lion is a subtype of Animal, then Cage<Lion> is *not* a subtype of Cage<Animal>.

### Invariance of Comparable

Therefore, if Animal implements Comparable<Animal>, Lion does *not necessarily* implement Comparable<Lion>.

(a)

Motivation Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

### **Excursion:** Bounded Types

#### Invariance of generic types

If Lion is a subtype of Animal, then Cage<Lion> is *not* a subtype of Cage<Animal>.

### Invariance of Comparable

Therefore, if Animal implements Comparable<Animal>, Lion does *not necessarily* implement Comparable<Lion>.

#### Lower bounds for Comparable

We want to allow Lion to implement Comparable<T> as long as T is a super type of Lion.

< D > < D > < D > < E > < E >

Motivation Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

# **Excursion:** Bounded Types

#### Lower bounds for Comparable

We want to allow Lion to implement Comparable <T> as long as T is a super type of Lion.

class BinarySearchTree
 <Any extends Comparable<? super Any>>
 {...}

(a)

Motivation Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

# **Binary Search**

#### Setup

Keep items in a tree. Each node holds one data item.

Ξ.

Motivation Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

# **Binary Search**

#### Setup

Keep items in a tree. Each node holds one data item.

#### Idea

The left subtree of a node V only contains items smaller than V and the right subtree only contains items larger than V.

크

Motivation Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

# **Binary Search**

#### Setup

Keep items in a tree. Each node holds one data item.

#### Idea

The left subtree of a node V only contains items smaller than V and the right subtree only contains items larger than V.

#### Search

can then proceed top-down, starting at the root. If the search item is smaller than the item at the root, go down to the left, and if it is larger, go right.

Motivation Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

# Example

# Both trees are binary trees, but only the left tree is a search tree.

æ.

Motivation Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

# Implementation

```
private static class BinaryNode<AnyType>{
 AnyType element;
  BinaryNode<AnyType> left;
  BinaryNode<AnyType> right;
  BinaryNode( AnyType theElement ) {
    this (the Element, null, null); }
  BinaryNode(AnyType theElement,
             BinaryNode<AnyType> It,
             BinaryNode<AnyType> rt) {
    element = theElement;
    left = lt; right = rt; }
}
```

Ξ.

イロト イヨト イヨト イヨト

Motivation Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

# Implementation

. . .

```
public class
BinarySearchTree<AnyType extends
                 Comparable<? super AnyType>>> {
  private static class BinaryNode<AnyType> {..}
  private BinaryNode<AnyType> root;
  public BinarySearchTree() {
    root = null; }
  public void makeEmpty() {
    root = null; }
  public boolean isEmpty() {
    return root == null; }
```

イロト イヨト イヨト イヨト

Motivation Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

# Implementation

```
public class
BinarySearchTree<AnyType extends
                Comparable<? super AnyType>>> {
  . . .
 public boolean contains( AnyType x ) {
    return contains(x, root); }
 public AnyType findMin() { // findMax similar
    if ( is Empty ( ) ) throw new Underflow Exception (
    return findMin( root ).element; }
 public void insert( AnyType x ) {
    root = insert( x, root ); }
 public void remove( AnyType x ) {
   root = remove( x, root ); }
```

Motivation Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

Implementation of Search

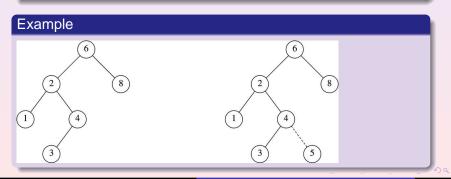

◆□ ▶ ◆□ ▶ ◆ □ ▶ ◆ □ ● ● ● ● ●

Motivation Excursion: Bounded Types Binary Search Trees Insertion and Deletion Analysis

# Insertion

#### Idea

Proceed like in search. If item is found, do nothing. If not, insert it in the last visited position.

Motivation Excursion: Bounded Types Binary Search Trees Insertion and Deletion Analysis

# Deletion

#### Idea

Proceed like in search. If item is not found, do nothing. If item is found, take action depending on node.

크

Motivation Excursion: Bounded Types Binary Search Trees Insertion and Deletion Analysis

# Deletion

#### Idea

Proceed like in search. If item is not found, do nothing. If item is found, take action depending on node.

#### Leaf

If the node is leaf, delete it from parent.

Motivation Excursion: Bounded Types Binary Search Trees Insertion and Deletion Analysis

# Deletion

#### Idea

Proceed like in search. If item is not found, do nothing. If item is found, take action depending on node.

#### Leaf

If the node is leaf, delete it from parent.

#### One child

If the node has one child, move the child to parent.

イロト イヨト イヨト イヨト

Motivation Excursion: Bounded Types Binary Search Trees Insertion and Deletion Analysis

### Example: Deletion of Node with One Child

One child

If the node has one child, move the child to parent.

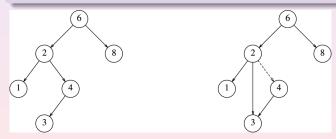

크

Motivation Excursion: Bounded Types Binary Search Trees Insertion and Deletion Analysis

### Example: Deletion of Node with One Child

#### One child

#### If the node has one child, move the child to parent.

Ξ.

・ロト ・回 ト ・ヨト ・ヨト

Motivation Excursion: Bounded Types Binary Search Trees Insertion and Deletion Analysis

### Deletion of Node with Two Children

#### Idea

Replace data with data of smallest child on the right; then delete smallest child on the right.

크

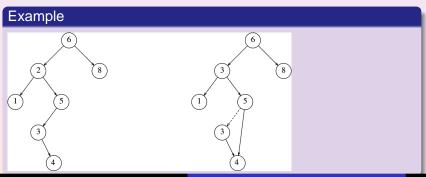

・ロン ・四 ・ ・ ヨン ・ ヨン

Motivation Excursion: Bounded Types Binary Search Trees Insertion and Deletion Analysis

## Deletion of Node with Two Children

#### Idea

Replace data with data of smallest child on the right; then delete smallest child on the right.

Motivation Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

## Average-case Analysis

#### Average Depth

If all insertion sequences are equally likely, the average depth of any node is  $O(\log N)$  (proof in Chapter 7)

Motivation Excursion: Bounded Types Binary Search Trees Binary Search Insertion and Deletion Analysis

### Average-case Analysis

#### Average Depth

If all insertion sequences are equally likely, the average depth of any node is  $O(\log N)$  (proof in Chapter 7)

#### Deletion introduces imbalance

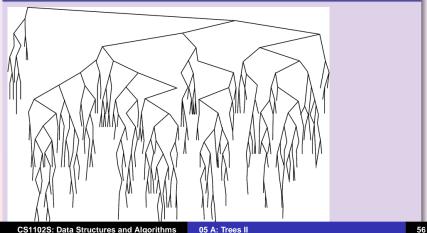

Deletion favours right subtree, and therefore trees become "left-heavy" on the long run.

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <
