Question 1. (2 marks)

The diagram below shows a 2×4 decoder with one-enable and active-high outputs. Fill in the list of minterms for F1(A,B,C,D) in the Σm notation (sum-of-minterms), i.e. $F1(A,B,C,D) = \Sigma m(...)$.

For example, if the answer is $\Sigma m(1,3,6)$, enter 1,3,6 (in increasing order of the minterm numbers, separated by comma, no other punctuation besides commas, and without any space). Pay attention to the order of the variables in the given function.

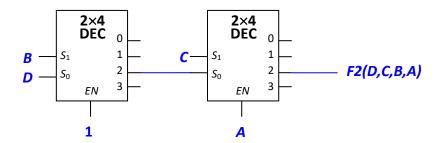

Answer:
$$F(A,B,C,D) = (A \cdot D)' \cdot (A+B)' \cdot C = (A'+D') \cdot (A' \cdot B') \cdot C = A' \cdot B' \cdot C + A' \cdot B' \cdot C \cdot D$$

= $A' \cdot B' \cdot C \cdot D' + A' \cdot B' \cdot C \cdot D = \sum m(2,3)$.

Question 2. (2 marks)

The diagram below shows a 2×4 decoder with one-enable and active-high outputs. Fill in the list of minterms for F2(D,C,B,A) in the Σm notation (sum-of-minterms), i.e. $F2(D,C,B,A) = \Sigma m(...)$.

For example, if the answer is $\Sigma m(1,3,6)$, enter 1,3,6 (in increasing order of the minterm numbers, separated by comma, no other punctuation besides commas, and without any space). Pay attention to the order of the variables in the given function.

Answer:
$$H(D,C,B,A) = A \cdot C \cdot (1 \cdot B \cdot D')' = A \cdot C \cdot (B'+D) = A \cdot B' \cdot C + A \cdot C \cdot D$$

 $= A \cdot B' \cdot C \cdot D' + A \cdot B' \cdot C \cdot D + A \cdot B' \cdot C \cdot D + A \cdot B \cdot C \cdot D$
 $= D' \cdot C \cdot B' \cdot A + D \cdot C \cdot B' \cdot A + D \cdot C \cdot B \cdot A = \sum m(5,13,15).$

Question 3. (2 marks)

The diagram below shows a 2×4 decoder with zero-enable and active-low outputs. Fill in the list of minterms for F3(X,Y,Z) in the Σm notation (sum-of-minterms), i.e. $F3(X,Y,Z) = \Sigma m(...)$.

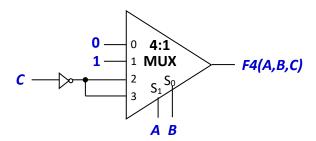

For example, if the answer is $\Sigma m(1,3,6)$, enter 1,3,6 (in increasing order of the minterm numbers, separated by comma, no other punctuation besides commas, and without any space). Pay attention to the order of the variables in the given function.

Answer: $F3(X,Y,Z) = (Z+(X+Y))\cdot (Z+(X+Y')) = Z + (X+Y)\cdot (X+Y') = Z + X + Y\cdot Y' = Z + X = \sum m(1,3,4,5,6,7).$

Question 4. (2 marks)

The diagram below shows a 4:1 multiplexer. Fill in the list of maxterms for F4(A,B,C) in the ΠM notation (product-of-maxterms), i.e. $F4(A,B,C) = \Pi M(...)$.

For example, if the answer is ΠM (2, 5, 7), enter 2,5,7 (in increasing order of the maxterm numbers, separated by comma, no other punctuation besides commas, and without any space). Pay attention to the order of the variables in the given function.

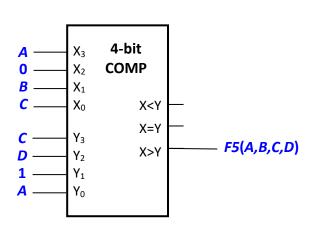

Answer: $F4(A,B,C) = 0 \cdot (A' \cdot B') + 1 \cdot (A' \cdot B) + C' \cdot (A \cdot B') + C' \cdot (A \cdot B) = A' \cdot B + A \cdot B' \cdot C' + A \cdot B \cdot C'$ = $A' \cdot B \cdot C' + A' \cdot B \cdot C + A \cdot B' \cdot C' + A \cdot B \cdot C' = \sum m(2,3,4,6) = \prod m(\mathbf{0},\mathbf{1},\mathbf{5},\mathbf{7}).$

Question 5. (2 marks)

The diagram below shows a 4-bit magnitude comparator. What is the simplified SOP expression of F5(A,B,C,D)?

If your product term contains more than one literal, you must have the dot (AND) symbol, or your answer will be considered wrong. Within a product term, the literals should be in alphabetical order. Literals should be in upper-case letters, and there should be no space and no symbols other than the dot, plus and single quote in your answer.
