Tutorial 9 (Week of 5Nov)	
	(b) Consider the following lambda expressions. Count the number of <i>redexes</i> (reducible
Question 1. Language Concepts (20 marks)	subexpressions) in each of these lambda terms. (5 marks)
(a) If a function body has an if statement with a missing else clause, then an	• $(\lambda \mathbf{x}. \mathbf{x}) (\lambda \mathbf{x}. \mathbf{x})$
exception is raised by Oz if its condition is false . Explain why this behavior is	• $(\lambda x. (\lambda x. x) x) (\lambda x. x)$
correct. However, this situation does not occur for procedures. Explain why not. (7 marks)	• $(\lambda \mathbf{x}. \mathbf{x} \mathbf{x}) (\lambda \mathbf{x}. \mathbf{x} \mathbf{x})$
context. However, this situation does not occur for procedures. Explain with not. (7 marks)	• $(\lambda \mathbf{x}, \mathbf{y}) ((\lambda \mathbf{x}, \mathbf{x}, \mathbf{x}) (\lambda \mathbf{x}, \mathbf{x}, \mathbf{x}))$
(b) One can claim that both the if and the case statements are of equal expressive	• $(\lambda x. x (\lambda x. x))$
power. Elaborate on the truth or falsity of this claim. (8 marks)	(c) Perform beta reductions using call-by-value (leftmost-innermost) strategy for the
(c) Given the following procedure: (5 marks)	following lambda expressions. If the reduction is non-terminating, suggest an
(c) Given the following procedure: (5 marks)	alternative reduction that terminates for the given code, if any. (7 marks)
proc {Test X}	
case X of	• $(\lambda \mathbf{x}. \mathbf{x}) (\lambda \mathbf{x}. \mathbf{x})$
f(a Y c) then {Browse 'case 1'}	• $(\lambda \mathbf{x}, \lambda) (\lambda \mathbf{x}, \lambda)$
else {Browse 'case 2'}	• $(\lambda \mathbf{x}, \mathbf{x}, \mathbf{x})$ $(\lambda \mathbf{x}, \mathbf{x}, \mathbf{x})$ $((\lambda \mathbf{x}, \mathbf{x})$
end	• $(\lambda x. y) ((\lambda x. x) (\lambda x. x))$ • $(\lambda x. y) ((\lambda x. x) (\lambda x. x))$
end	
	• $(\lambda \mathbf{x}. \mathbf{x} (\lambda \mathbf{x}. \mathbf{x}))$
Predict what would happen when you execute the following codes:	(d) Given a lambda term T . How would you show that this term is a <i>fix-point</i> operator? Comment <i>briefly</i> on the significance of fix-point operators. (6 marks)
(i) declare X Y {Test f(X b Y)}	
(ii) declare X Y {Test f(a Y d)}	Question 3. Stack ADT (20 marks)
(iii) declare X Y {Test f(a Y c)}	
(iv) declare X Y {Test f(X Y d)}	Consider a stack ADT that is non-declarative whose operations may have side-effects. An
(v) declare X Y {Test f(X Y c)}	example operation is given below :
Question 2. Lambda Calculus (25 marks)	Push :: Stack <x>, X> ()</x>
Question 2. Lamoda Calculus (25 marks)	// takes a stack and an element which is pushed
(a) Consider the following lambda expressions. <u>Circle</u> the <i>free variables</i> in these	// to the top of the stack
expressions. (7 marks)	
(/ marks)	When executed, this procedure will modify its stack by pushing a new element on the top
• $(\lambda \mathbf{x} \cdot \mathbf{y})$	of the stack.
$\bullet (\lambda \mathbf{x} \cdot \mathbf{y}) \\ \bullet (\lambda \mathbf{x} \cdot \mathbf{x})$	
	(a) Provide more stack operations that would allow you to construct, modify and query
• $(\lambda \mathbf{x}. (\lambda \mathbf{y}. \mathbf{y})) \mathbf{x}$	the stack ADT. Give only the polymorphic type interface <i>without</i> implementation
• $(\lambda x. (\lambda y. x)) x$	details. (8 marks)
• $(\lambda \mathbf{x}. (\lambda \mathbf{y}. \mathbf{x})) \mathbf{y}$	(b) Show how you would implement this non-declarative stack ADT by showing how
• $\lambda z. ((\lambda x. z) (\lambda x. z))$	each of its operations may be implemented in Oz. (Hint : You may need to use
• $(\lambda z. (\lambda x. z)) (\lambda x. z)$	mutable data structure, such as Cell, Array or Dictionary.) (12 marks)
1	2

Question 4. Concurrency (15 marks)

```
The following is a naive attempt to write a concurrent Filter function:
```

```
fun {Filter L F}
  case L of
    X|Xs then if thread {F X} end
        then X|{Filter Xs F}
        else {Filter Xs F} end
    end
end
```

(a) Comment *briefly* on the effectiveness of this attempt.

(6 marks)

(b) Suggest how you may provide an alternative Filter operation with better concurrency. Outline the key steps that you need to make. Please provide a narrative of your solution, but <u>do not</u> provide any program code at all. (**Hint** : You may make use of non-declarative message-passing concurrency scheme.) (9 marks)
