

# Item Genie

Analysis software for item comparison

Matcha: Lee Zhi Xin, Peng Ziwei, Zhao Yang

# See first, talk later

System demomstration

# Inspiration

Rapidly changing game situations

# Inspiration

Constant patching and updates

# Inspiration

A thirst for strategy

# Who will love our program?

Serious gamers

# Who will love our program?

Beginners

# Who will love our program?

And even game designers

# Type of system

Non-real-time

# Type of system

Client-server application

# What it does

Compares across multiple attributes between multiple items

# What it does

Informs users how much value they are getting for each gold

# What it does

Sorts items according to how much bonus they give in each attribute

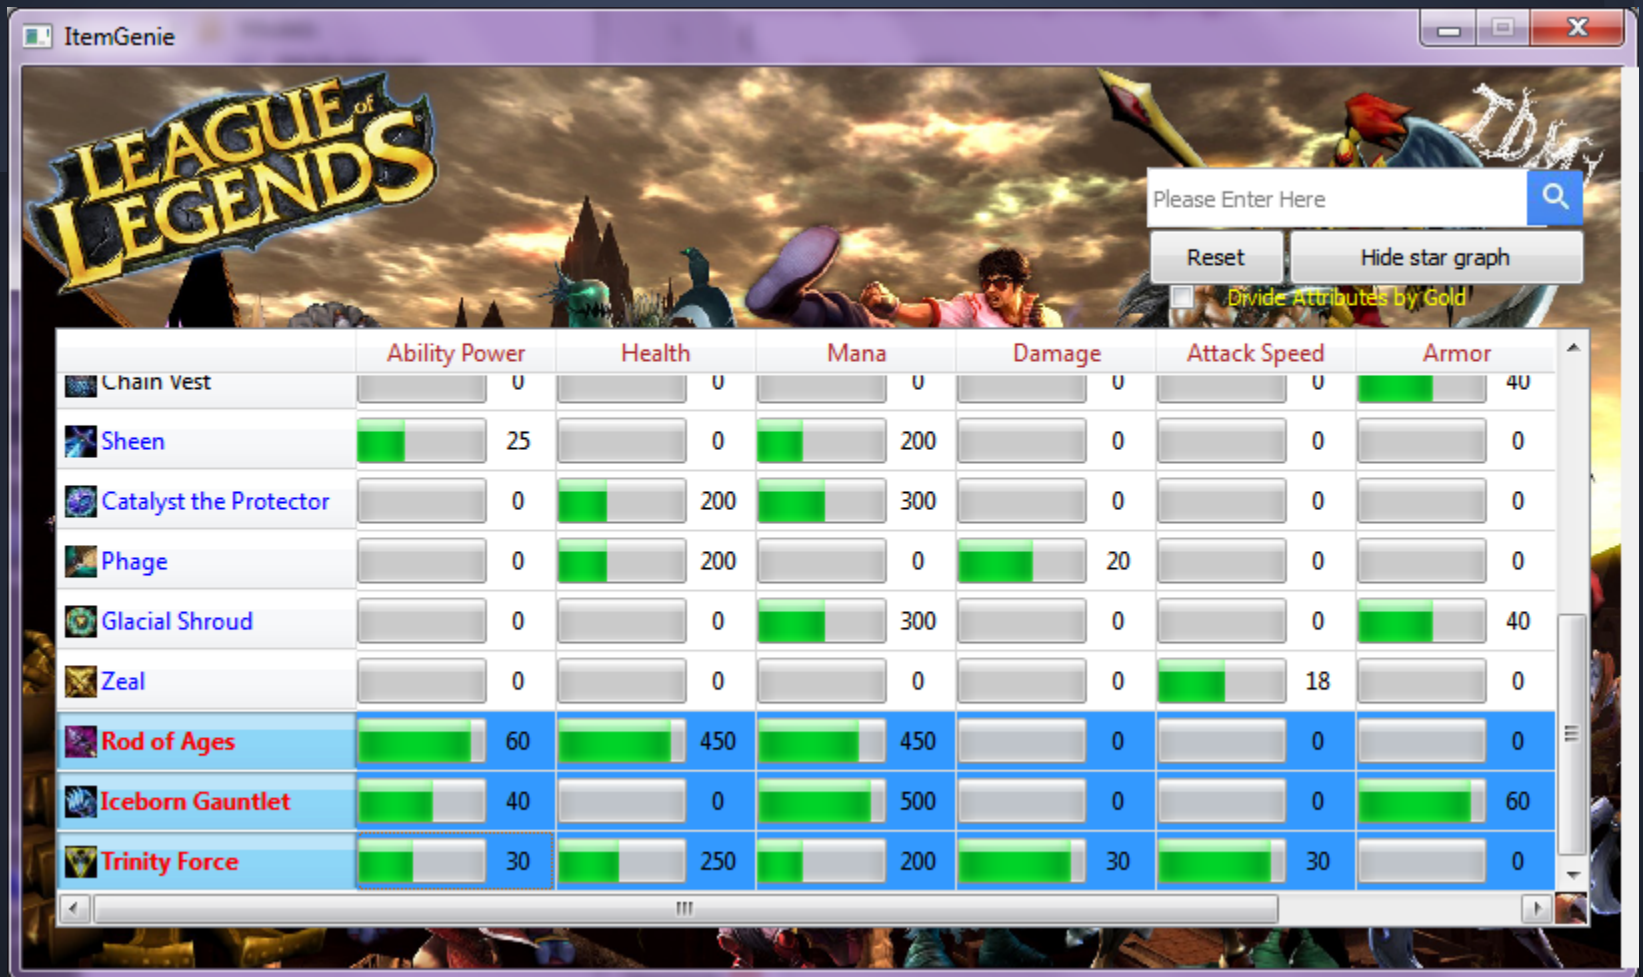

# GUI design

# Major functionalities

Selection of items and attributes for graphical comparison

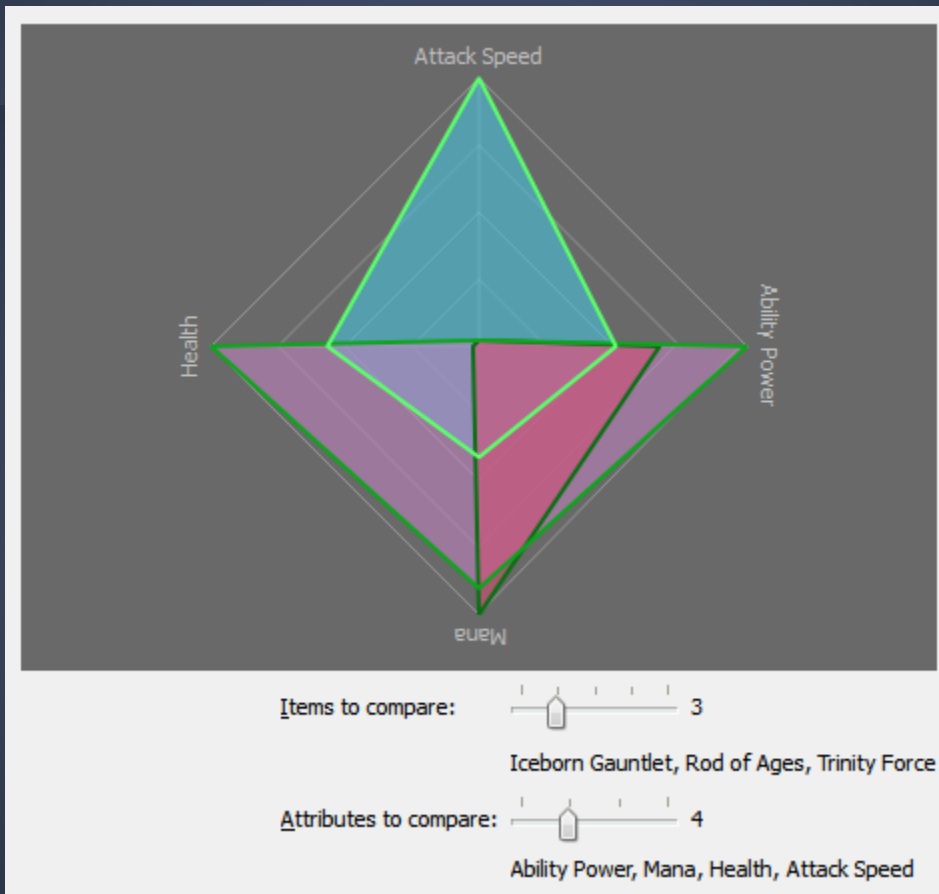

Bar graph comparison

Star-graph comparison

# Major functionalities

# Priority sorting

[illegible]

# Major functionalities

Grouping by tier and comparing within the tier

	Damage	Ability Power	Attack Speed	Mana	Health	Armor
 Chain Vest	<div><div></div></div> 0	<div><div></div></div> 0	<div><div></div></div> 0	<div><div></div></div> 0	<div><div></div></div> 0	<div><div></div></div> 40

Sapphire Crystal Amplifying Tome

# Design principles

User in control

Allowing users to select items and attributes for comparison

# Design principles

See-and-point

Selection of items and attributes with a click

# Design principles

- Dynamic updating

- Star graph is updated automatically when items are selected

# Design principles

Metaphors

Item build represents the pyramid build of items

# Design principles

Colour coding

Different colours to represent different tiers and items

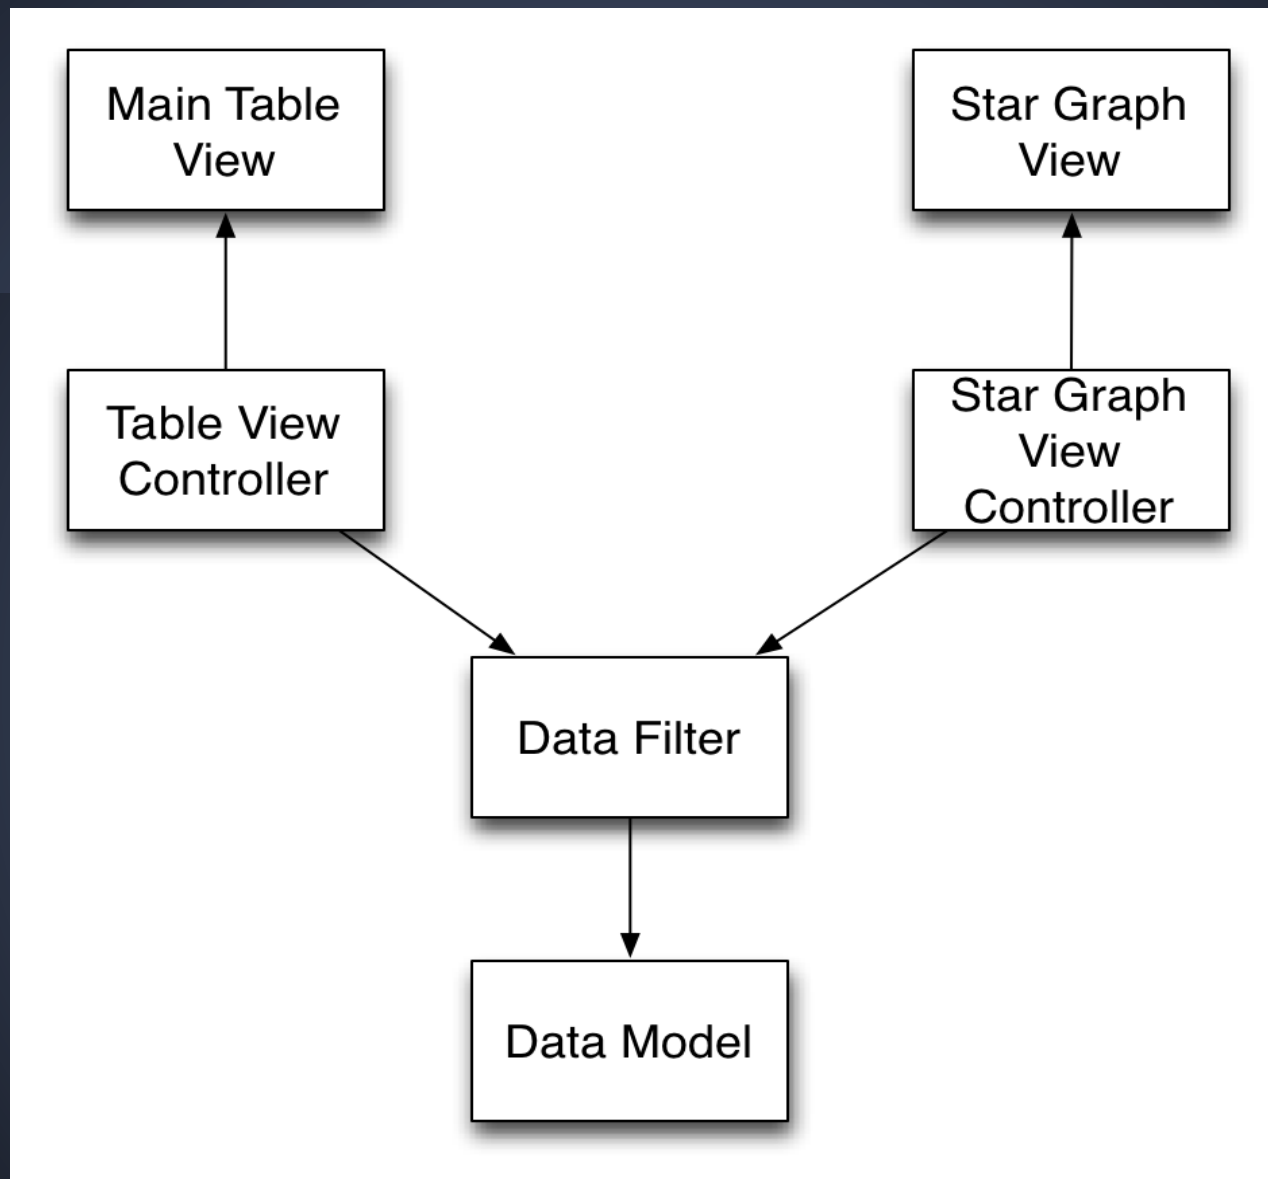

# Design principles

## Usability

- Search box automatically on focus when program starts

- Mouse-over shows item attributes and build
