- User can *search* for existing bookmarks.

BMS Design

A View-ViewModel-Model pattern

BMS Design - Model

- OrganizerWidget is the ViewModel, GridWidget is the View and ActualDataModel is the model.
- OrganizerWidget offers a specialization of the ActualDataModel that is easier to map to GridWidget (Currently selected folder).
- OrganizerWidget and GridWidget bound to each other via signals.
- All three are singletons to enforce a single instance and to facilitate global usage.

BMS Design - View

The image shows a standard Windows-style dialog box titled "bookmark". It features three text input fields stacked vertically, each preceded by a label: "Name:", "Address:", and "Tags:". At the bottom of the dialog, there are two buttons: "Ok" on the left and "Cancel" on the right. The dialog box has a title bar with a small icon on the left and standard window control buttons (minimize, maximize, close) on the right.
