

In the Lecture Series Logic Programming and Constraints

Definite Clause Grammars

Presented by Stéphane Bressan

Logic Programming and Constraints

"PROgrammation en LOGique"

The language was invented by Alain Colmerauer and baptized by Philippe Roussel in 1972 at University of Marseille, France

Robert Kowalski at Imperial College, London, UK had invented the Logic Programming equation:

$$LP = \text{Logic} + \text{Control}$$

Logic Programming and Constraints

Definite Clause Grammar

Prolog was initially invented to support Definite Clause Grammars for natural language processing

Logic Programming and Constraints

DCG of DCG

grammar_rule --> grammar_head, [‘->’], grammar_body.
grammar_head --> non_terminal.

grammar_body --> grammar_body, [‘;’], grammar_body.
grammar_body --> grammar_body, [‘:’], grammar_body.

grammar_body --> grammar_body_item.
grammar_body_item --> [‘!’].
grammar_body_item --> [‘{’], Prolog_goals, [‘}’].
grammar_body_item --> non_terminal. % any prolog term
grammar_body_item --> terminal. % list of input

Logic Programming and Constraints

Example DCG

```
word --> a, b.  
a --> [].  
a --> a, [a].  
b --> [b].  
  
:- phrase(word,  
        [a,a,a,b,b,b],  
        L).  
% phrase/3 or phrase/2
```

```
a(L, L).  
a(L1, L3) :-  
    a(L1, L2),  
    'C'(L2, a, L3).  
  
b(L1, L2) :-  
    'C'(L1, b, L2).  
  
word(L1, L3) :-  
    a(L1, L2),  
    b(L2, L3).
```

Logic Programming and Constraints

‘C’

‘C’([Token|Rest], Token, Rest).

It can be redefined to read other data than lists (for instance strings, streams, etc.)

Logic Programming and Constraints

Example DCG

```
word(A) :- a(A), b.  
a(0) :- [].  
a(A) :- a(B), [a],  
        {A is B+1}.  
b :- [b].
```

```
a(L, 0, L).  
a(L1, A, L3) :-  
    a(L1, B, L2),  
    'C'(L2, a, L3), A is B + 1.  
  
b(L1, L2) :-  
    'C'(L1, b, L2).  
  
word(L1, A, L3) :-  
    a(L1, A, L2),  
    b(L2, L3).
```

Logic Programming and Constraints

Adjective Forming Affixes in Indonesian

- Pe-
 - pemarah, pendiam (add n before consonant other than m), penidur (replace t by n)
- Se-
 - secantik, sesopan, sebesar
- Ber-
 - berbahaya
- Ter-
 - termurah, tercantik
- Ke-an
 - kebesaran, kekecilan
- MeN-kan
 - membosankan (n becomes m in front of b), memuaskan (n disappears in front of m), menyenangkan (n disappears and ny replaces s)
- -an
 - bagusan

Logic Programming and Constraints

Root words

- Marah
- Diam
- Tidur
- Malas
- Cantik
- Sopan
- Mahal
- Bahaya
- Murah
- Baik
- Tinggi
- Besar
- Kecil
- Kecil
- Haus
- Puas
- Bosan
- Malu
- Senang
- Bagus
- Gede

Write a DCG for the affix formation of adjectives in Indonesian with the following root words

Logic Programming and Constraints
