Experience the fun of problem solving

The Tourist Problem

❑ **Organization**

NUS National University of Singapore
School *of* Computing

- ❖ **The Tourist Problem**
- ❖ **Analysis and Simplifications**
- ❖ **Problem Modeling (with *Graphs*)**
- ❖ **Solving the *Graph* Model**
- ❖ **Mapping back the Solution**
- ❖ **Moral of the Story**

Experience the fun of problem solving

The Tourist Problem (NYGH)…

Given: A list of parents, each with his/her list of places to visit.
To do: Schedule guided tours for them so that each parent visits all the places in his/her list.

An Instance of Tourist Problem	
Tourist	**Places of Interest**
Aaron	SAC, TS, RS
Betty	QD, YZL, TS
Cathy	PPL, ECP, SMA
David	YZL, QD, SMA
Evans	QD, YZL, SAC
Frances	TS, SAC, RS
Gary	QD, SMA
Harry	YZL, QD

The Tourist Problem (NYGH-Entities)

❑ **Good to know the entities we are dealing with…**

- ❖ **The Tourists:**
  $T = \{ A, B, C, D, E, F, G, H \}$
- ❖ **The Attractions (Places):**
  $P = \{ ECP, PPL, QD, RS, SAC, SMA, TS, YZL \}$

… Places of Attraction …			
Place	**Common Name**	**Place**	**Common Name**
ECP	Eco Pond	PPL	PoPuLar @NYGH
QD	Quadrangle	RS	Recording Studio
SAC	Student Activities Centre	SMA	Siew May Auditorium
TS	Tyre Swing (*disappeared*)	YZL	Sun Yan Zi Library

The Tourist Problem…

Given: A list of tourist, each with his/her list of places to visit.
To do: Schedule bus rides for them so that each tourist visits all the places in his/her list.

An Instance of Tourist Problem	
Tourist	**Places of Interest**
Aaron	SZG, BG, JB
Betty	CG, JG, BG
Cathy	VC, SI, OR
David	JG, CG, OR
Evans	CG, JG, SZG
Frances	BG, SZG, JB
Gary	CG, OR
Harry	JG, CG

The Tourist Problem (Entities)

❑ **Good to know the entities we are dealing with…**

- ❖ **The Tourists:**
  $T = \{ A, B, C, D, E, F, G, H \}$
- ❖ **The Attractions (Places):**
  $P = \{ BG, CG, JB, JG, OR, SI, VC, SZG \}$

… Places of Attraction …			
Place	**Common Name**	**Place**	**Common Name**
BG	Botanical Gardens	CG	Chinese Gardens
JB	Jurong Birdpark	JG	Japanese Gardens
OR	Orchard Road	SI	Sentosa Island
SZG	Spore Zoological Gardens	VC	VivoCity

1

The Tourist Problem (Analysis…)

Some Simplifications: Consider
- ❖ **Aaron** { SZG, BG, JB }
- ~~Frances { SZG, BG, JB }~~

Also consider
- ❖ **David** { JG, CG, OR }
- ~~Gary { CG, OR }~~

An Instance of Tourist Problem

Tourist	Places of Interest
Aaron	SZG, BG, JB
Betty	CG, JG, BG
Cathy	VC, SI, OR
David	JG, CG, OR
Evans	CG, JG, SZG
~~Frances~~	~~BG, SZG, JB~~
~~Gary~~	~~CG, OR~~
~~Harry~~	~~JG, CG~~

Simplification Rule:

If $P(T_1) \subseteq P(T_2)$, then tourist T_1 can just "follows" tourist T_2. Thus, we can omit T_1 from consideration.

Oh, can also omit Harry
- ❖ **Betty** { CG, JG, BG }
- ~~Harry { CG, JG }~~

The (Reduced) Tourist Problem…

Given: A list of tourist, each with his/her list of places to visit.
To do: Schedule bus rides for them so that each tourist visits all the places in his/her list.

An Instance of Tourist Problem

Tourist	Places of Interest
Aaron	SZG, BG, JB
Betty	CG, JG, BG
Cathy	VC, SI, OR
David	JG, CG, OR
Evans	CG, JG, SZG

$T = \{ A, B, C, D, E \}$

$P = \{ BG, CG, JB, JG, OR, SI, VC, SZG \}$

The Tourist Problem – v0

Given: A list of tourist, each with his/her list of places to visit.
To do: Schedule bus rides for them so that each tourist visits all the places in his/her list.

Solution: (Singapore 1-Day Tour)

Put all the tourists on one bus. Visit all eight places in 1 day.

An Instance of Tourist Problem

Tourist	Places of Interest
Aaron	SZG, BG, JB
Betty	CG, JG, BG
Cathy	VC, SI, OR
David	JG, CG, OR
Evans	CG, JG, SZG

What's Good: It works! One bus, one-day.
What's Bad: Too rushed. NO time to see anything!

Not interesting!

The Tourist Problem – v0.5

Given: A list of tourist, each with his/her list of places to visit.
To do: Schedule bus rides for them so that each tourist visits all the places in his/her list, *and*
C1: Each tourist visits *at most one place a day*.

Simple Solution:

Schedule *one trip to every place every day*.

An Instance of Tourist Problem

Tourist	Places of Interest
Aaron	SZG, BG, JB
Betty	CG, JG, BG
Cathy	VC, SI, OR
David	JG, CG, OR
Evans	CG, JG, SZG

What's Good: It works! Finish in 3 days. (*minimum*!)
What's Bad: Wasteful! 24 bus trips.

Also, not so interesting!

The Tourist Problem – v0.8

Given: A list of tourist, each with his/her list of places to visit.
To do: Schedule bus rides for them so that each tourist visits all the places in his/her list,
C1: Each tourist visits *at most one place a day*, *and*
C2: There is *at most one bus trip to each place*

Simple Solution:

Schedule *one trip per day*, each to a *different* place.

An Instance of Tourist Problem

Tourist	Places of Interest
Aaron	SZG, BG, JB
Betty	CG, JG, BG
Cathy	VC, SI, OR
David	JG, CG, OR
Evans	CG, JG, SZG

What's Good: It works! 8 trips.
What's Bad: It takes 8 days!

But wait… Did you see something interesting?

The Tourist Problem – v1.0

Given: A list of tourist, each with his/her list of places to visit.
To do: Schedule bus rides for them so that each tourist visits all the places in his/her list,
C1: Each tourist visits *at most one place a day*,
C2: There is *at most one bus trip to each place*, *and*
C3: *minimize* the number of days to complete mission.

Observation:
On the same day,
cannot schedule SZG and BG
can schedule SZG and OR

An Instance of Tourist Problem

Tourist	Places of Interest
Aaron	SZG, BG, JB
Betty	CG, JG, BG
Cathy	VC, SI, OR
David	JG, CG, OR
Evans	CG, JG, SZG

How to model all these constraints?

2

Activity Period #1:

Bus Scheduling DIY (Do It Yourself)

(5 minutes)

Hon Wai Leong, SoC, NUS   Copyright © 2007 by Leong Hon Wai   (The Tourist Problem) Page 13

Review of Activity #1

❑ **How many days did you use?**
  ❖ ____ days

❑ **What was the main difficulty?**
  ❖ **What if we are talking about 100 tourists?**
  ❖ **… and 20 different attractions?**

❑ **Was there a lot of repetitive task?**
  ❖ **How was the task?**

❑ **How can we do better?**

Hon Wai Leong, SoC, NUS   Copyright © 2007 by Leong Hon Wai   (The Tourist Problem) Page 14

The Graph Model

❑ **What is a graph?**
  ❖ **eg: $y = sin(bx)$**

y=sinbx   b=1   b=2   b=3   b=0.5
❑ **No. Not this type of graph.**

Hon Wai Leong, SoC, NUS   Copyright © 2007 by Leong Hon Wai   (The Tourist Problem) Page 15

The Graph Model

❑ **Graph $G = (V, E)$**
  ❖ *V* is a set of vertices, nodes (circles)
  ❖ *E* is a set of edges (connections)

Nodes are Places

Edges represent "conflicts"

An Instance of Tourist Problem	
Tourist	**Places of Interest**
Aaron	SZG, BG, JB
Betty	CG, JG, BG
Cathy	VC, SI, OR
David	JG, CG, OR
Evans	CG, JG, SZG
In our graph, nodes are places, and edges in the graph means conflicts.

Graph Model for the Tourist Problem

An Instance of Tourist Problem	
Tourist	**Places of Interest**
Aaron	SZG, BG, JB
Betty	CG, JG, BG
Cathy	VC, SI, OR
David	JG, CG, OR
Evans	CG, JG, SZG

$G = (V, E)$
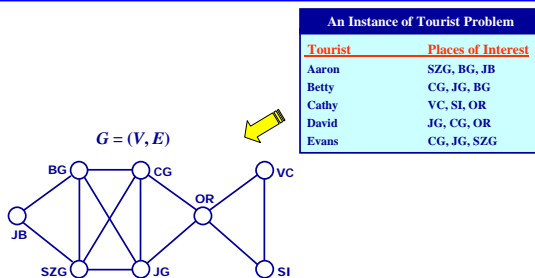

The graph $G = (V, E)$ captures all the conflicts for our tourist problem instance.
Hon Wai Leong, SoC, NUS   Copyright © 2007 by Leong Hon Wai   (The Tourist Problem) Page 17

Graph Model for the Tourist Problem

❑ **What's good about the graph model?**
  ❖ *very simple* **!**
  ❖ **easy to spot conflicts**
     and the *non-conflicts*

$G = (V, E)$

On Day 1,
   can schedule SZG, OR
   [Any more? Why?]

On Day 2,
   can schedule JB, CG, VC

On Day 3,
   can schedule BG, SI

On Day 4,
   can schedule JG
Hon Wai Leong, SoC, NUS   Copyright © 2007 by Leong Hon Wai   (The Tourist Problem) Page 18

Graph Coloring Problem

❑ Given a graph $G = (V, E)$, colour the vertices in V so that any two vertices that are connected by an edge in E will have *different* colors.

We want to *minimize* the number of colors.

$G = (V, E)$

$G = (V, E)$

Number of colours used to colour the graph G = Number of days needed to complete the schedule

---

Activity Period #2:

Graph Colouring Exercises

(10 minutes)

Review of Activity #2

❑ Is Graph Colouring fun?
 ❖ Did you *really* used *different* colours?

❑ How many colours was did you use (Q1)?

❑ What about the *cycles* (Q2):
 ❖ Q2(a): C_6 (a cycle of length 6)?
 ❖ Q2(b): C_5 (a cycle of length 5)?
 ❖ What else can you say?

❑ What about the graph in Q3?

❑ What about Q4?
 ❖ Why

Get Solution to Tourist Problem - 1

❑ Coloured graph ⇒ "Bus Schedule"
$G = (V, E)$

COLORED GRAPH

Color	Day	Place
🔴	1	SZG, OR
🔵	2	JB, CG, VC
🟣	3	BG, SI
🟢	4	JG

1. What about the list of tourists on each bus?
 Can we get it from the graph model?
  NO. *Why* NOT.

The Tourist Problem…

Modelling in Tourist Problem

Recap: Our Graph modelling…

Graph Model	Tourist Problem			
Nodes	*places*			
Edges / Conflicts	*tourist want to visit both places*			
Colors	*bus trips to places*			
Others	*The tourists*			

Moral of the Story

- ❑ **The Tourist Problem:**
    - ❖ **Some problems are EASY. (*don't* complicate them)**
    - ❖ **Get a *simple* solution first.**
        - **then *analyze* it, *improve* it, *refine* it.**
    - ❖ **Solution depend on the questions asked**
    - ❖ **It is important to *ask questions*.**
    - ❖ **Theoretical *modeling and analysis* are beneficial**
- ❑ **Modeling**
    - ❖ **Abstract modeling *simplifies* problem and solution!**
    - ❖ **Abstract model is *transferable*.**
    - ❖ **Models don't answer everything.**

Graph Colouring & Applications

- ❑ **Where *else* is Graph Colouring used?**
    - ❖ **The Tourist Problem [done]**
    - ❖ **Map Colouring**
    - ❖ **Fish in a Tank**
    - ❖ **Frequency assignment in wireless networks**
    - ❖ **Time Table Scheduling**
    - ❖ **And a whole lot more…**
> *Experience the fun of problem solving*

The Map Coloring Problem

**We want to color countries, oceans, lakes, and islands on a map so that no two adjacent areas have the same color.**

Two colors

Three colors

Four colors

The Map Coloring Problem

We want to color countries, oceans, lakes, and islands on a map so that no two adjacent areas have the same color.

Two colors

Three colors

Four colors

Map and Graph Coloring

Map to be colored

Equivalent graph

Coloring the graph

The Four Color Theorem

Question:

Can *all* map be coloured using only four colours?

Does four colour suffices?
April Fool Joke!

Martin Gardner published in Scientific American (*April* 1975) this map of 110 regions. He claimed that the map *requires five colors* and constitutes a counterexample to the four-color theorem.

However, the coloring of Wagon, obtained algorithmically using *Mathematica*, clearly shows that this map is, in fact, four-colorable.

Activity Period #3:

Map Colouring &

Fish in a Tank

(10 minutes)
Review of Hands-on Activity #3

❑ **How many colours did the map need?**
  ❖ **You should never need more than 4 colours**

❑ **Did you know about the**
  "Four-Colour Theorem"?

❑ **How many fish tanks did you need?**

Activity 5: Color These Maps
### Use as few colors as possible

Real map: One color already used   Made-up map

Summary of Problem Modelling

	Tourist Problem	Fish in a tank	Frequency Assignment	Map Coloring
Nodes	places	fishes	radio stations	Countries
Edges / Conflicts	tourist want to visit both places	cannot be placed in same tank	interference if placed too near	share a common border
Colors	bus trips to places	fish tanks	signal frequencies	color
Others	The tourists	--		

Why CS dept teach abstract problems?

Fish in a Tank
Freq. Assign
Exam Time Table
Map Colouring
Tourist Problem

...
...
...
...
Tourist Schedule

CS dept should teach abstract graph modelling

Graph Model → *graph colouring* → Coloured Graph

One abstract model, *many application*;
One graph-colouring program, *many applications*.
