Subject: IT and scientific computing manager - Genome Institute of Singapore

Dear colleague,

Please forward the following to anyone who you think would be interested in the following opportunity.

The Genome Institute of Singapore (<http://www.gis.a-star.edu.sg>) seeks a manager to oversee its IT infrastructure and scientific computing needs. These needs include support for next generation sequencing technologies, human genotyping, and computational biology researchers. The manager will be responsible for coordinating bioinformatics resources and data analysis pipelines; liaising with scientific research staff to identify new areas of need; guiding internal development efforts in data management and processing; and planning and managing the IT budget.

Applicants are expected to have a strong background in computer science, computational biology, bioinformatics and/or information technologies. Experience with second generation sequencing technologies is desirable, but not required. Strong preference will be given to individuals with an established track record of management.

Applicants are requested to send a CV, including names and email contact information for three references, to gisrecruit@gis.a-star.edu.sg. Please include "IT manager" in the subject line. Questions may be directed to Neil Clarke (clarcken@gis.a-star.edu.sg).

Thanks,
Neil Clarke
